R&D Spending, Trends, and Results	14
Summary: For Japanese society and patients	20

Introduction: Who We Are

We are devoted to advancing public policies that support innovative medical research, yield progress for patients today, and provide hope for the treatments and cures of tomorrow

PhRMA Japan represents U.S. based pharmaceutical companies. Our activities vary from promoting healthcare system reform to providing medical information to patients.

Mission

PhRMA Japan's mission is to promote the health of patients and contribute to the healthier lives of all people

EFPIA Japan represents R&D-based European pharmaceutical companies. We focus on patient needs in Japan, engage in discussions with key stakeholders regarding public health, and work to improve the R&D environment for pharmaceutical companies.

Mission

EFPIA Japan's mission is to enhance the health of Japanese patients by introducing innovative drugs and vaccines

PhRMA and EFPIA member companies

PhRMA	EFPIA	
AbbVie GK	Actelion Pharmaceuticals Japan Ltd.	Janssen Pharmaceutical K.K.
Amgen Astellas BioPharma K.K.	AstraZeneca K.K.	LEO Pharma K.K.
Biogen Japan Ltd.	Bayer Yakuhin, Ltd	Lundbeck Japan K. K.
Bristol-Myers Squibb K.K.	Bracco-Eisai Co., Ltd.	Merck Serono Co.,Ltd.
Celgene K.K.	Chugai Pharmaceutical Co., Ltd.	Mylan EPD G.K.
Eli Lilly Japan K.K.	CSL Behring K.K.	Nihon Servier Co.,Ltd.
Janssen Pharmaceutical K.K.	Ferring Pharmaceuticals Co., Ltd.	Nippon Boehringer Ingelheim Co ., Ltd.
MSD K.K.	Galderma (Japan) K.K.	Novartis Pharma K.K.
Mundipharma K.K.	GE Healthcare Japan Corporation	Novo Nordisk Pharma Ltd.
Pfizer Japan Inc.	GlaxoSmithKline K.K.	Sanofi K.K.
	Guerbet Japan K.K.	Shire Japan K.K.
	Ipsen Pharma SAS	UCB Japan Co. Ltd.

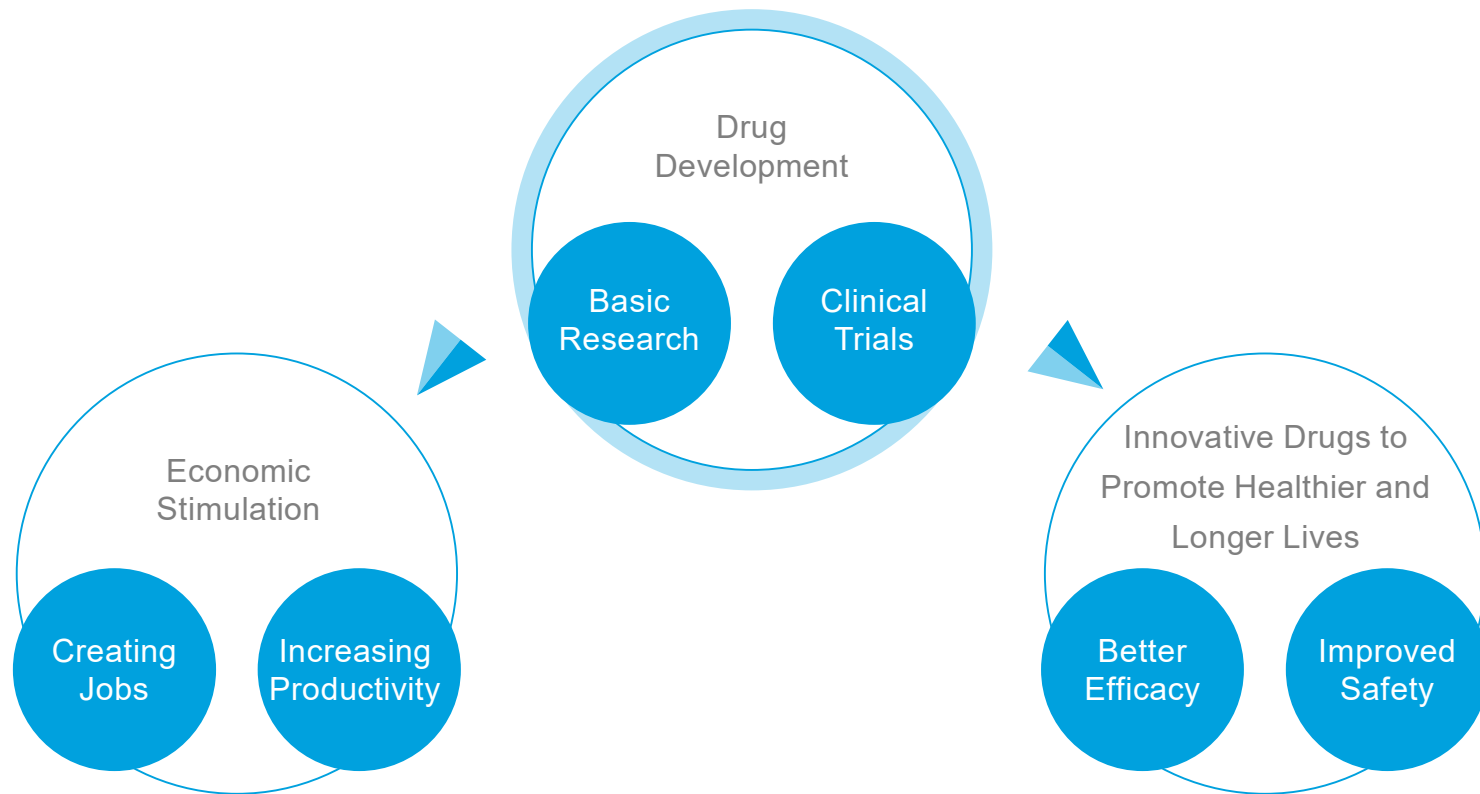

Pharmaceutical Industry and Society

Pharmaceutical companies contribute to society and the economy in multiple ways

Pharmaceutical companies collaborate with local clinics and hospitals to develop new drugs.

This in turn provides economic stimulus and leads to innovative new medicines with better efficacy and safety profiles.

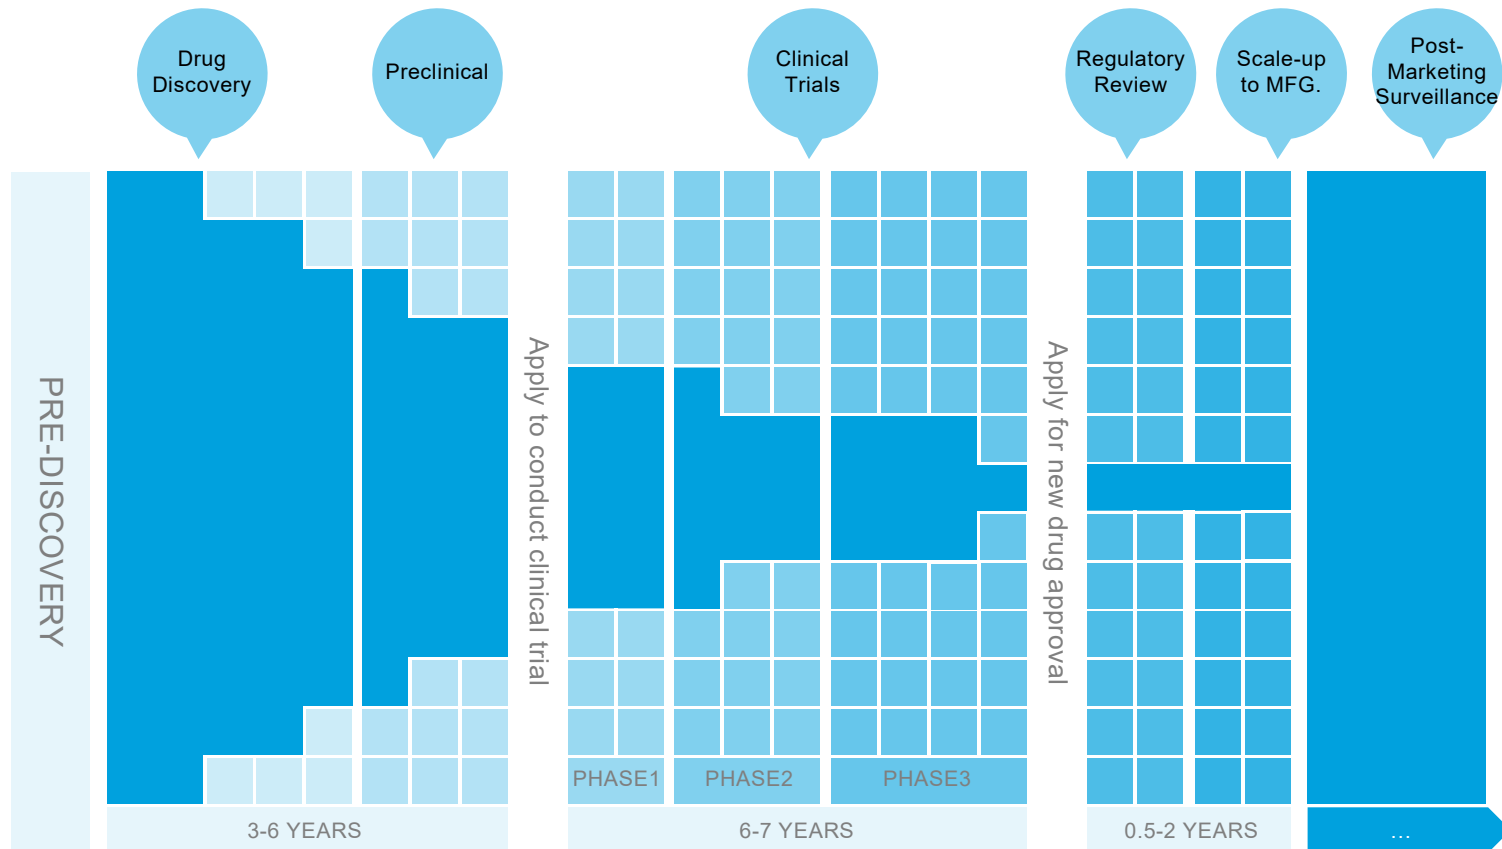

Collaborating on Clinical Trials

Discovering and developing new medicines is a long, complex, and costly process

Developing innovative medicines takes an average of 10-15 years and 2.6B USD. Less than 12% of the candidate medicines that make it into phase I clinical trials are approved. Many promising compounds fail after pharmaceutical companies have spent substantial amounts of money on testing and clinical trials

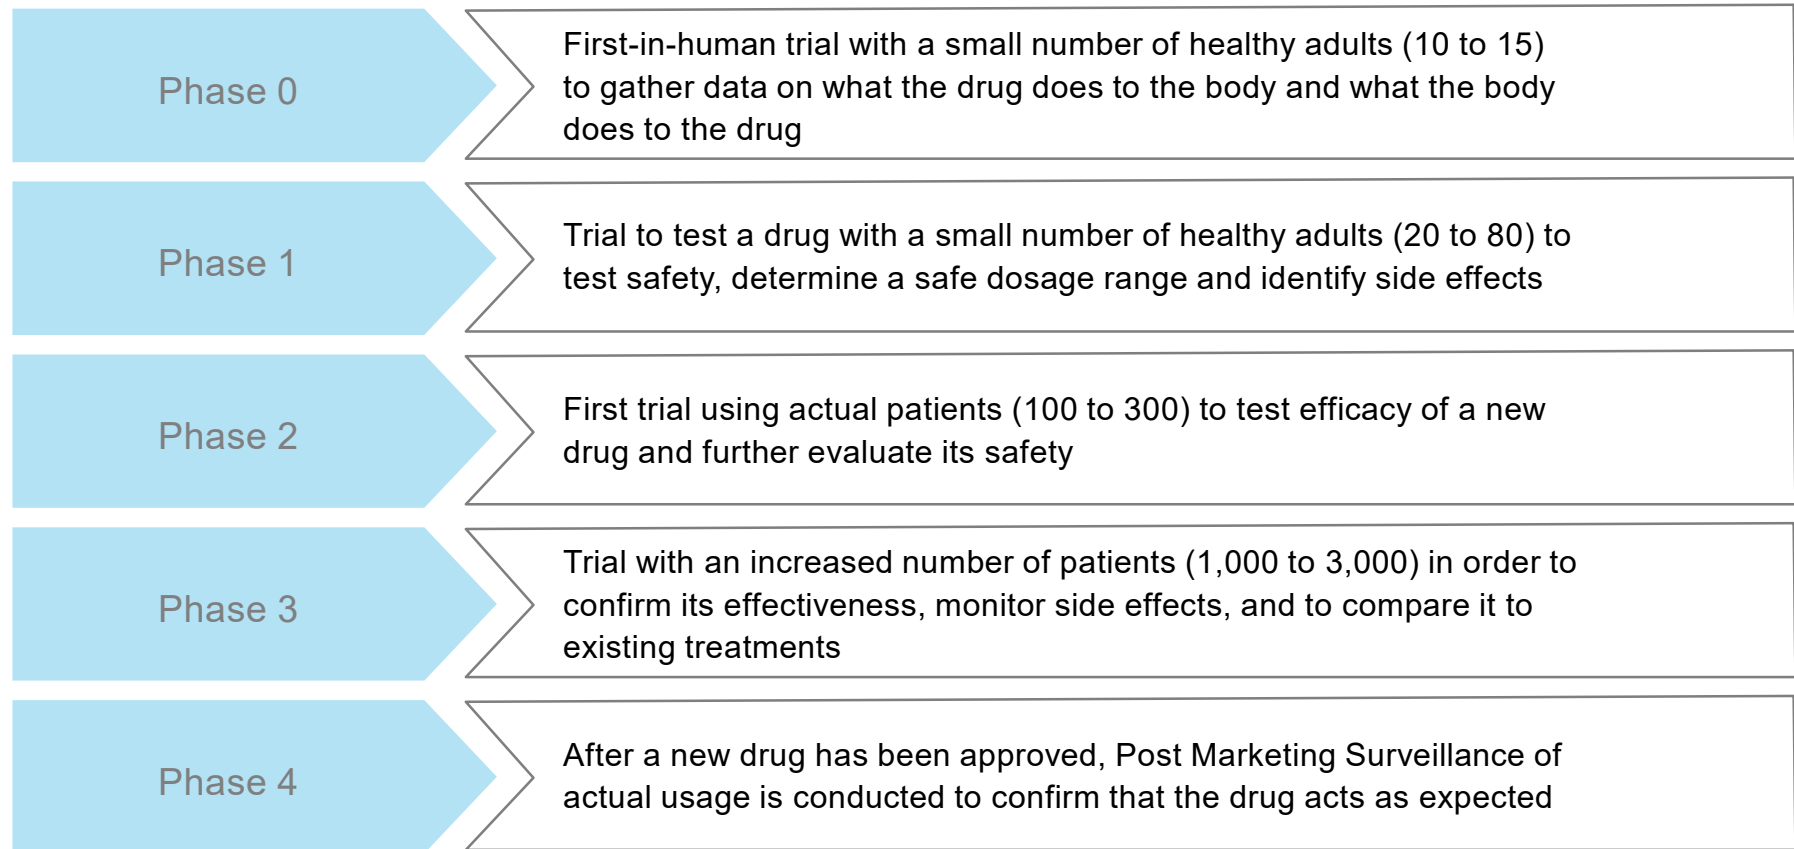

Source: Cost of Developing a New Drug, Tufts Center for the Study of Drug Development, Tufts School of Medicine. November 2014.

What is a Clinical Trial?

Computer simulations and animal testing are not enough to determine the efficacy and safety of new drugs for people. Clinical trials are conducted in five phases with the aim of clarifying the impact of experimental drugs on humans.

Source: PhRMA

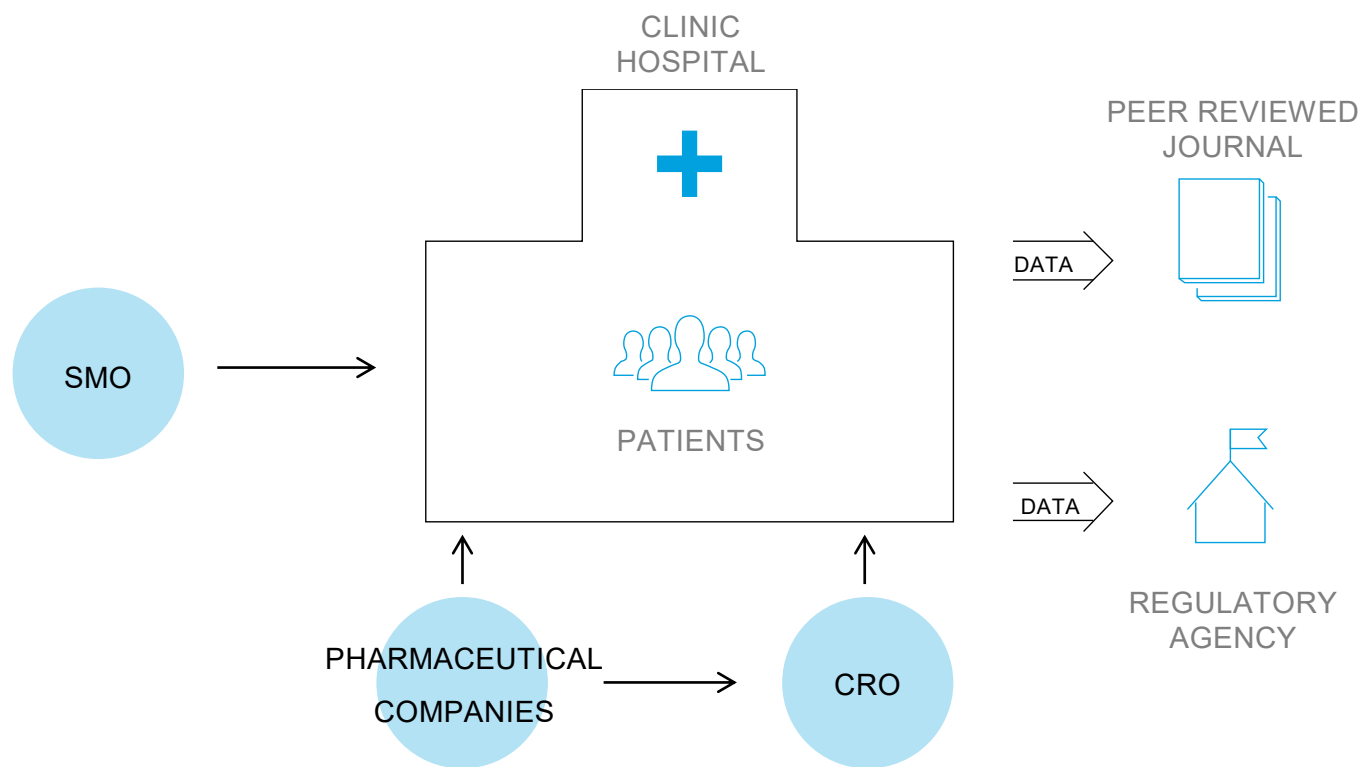

What are Therapeutic Areas?

Therapeutic areas are general categories of illnesses, including the examples below

Therapeutic Area	Example
Allergy	Allergic rhinitis, Asthma, Atopic dermatitis, etc.
Infectious disease	Influenza, Hepatitis C/B, Herpes, etc.
Hematology	Anemia, Hemophilia, etc.
Respiratory disease	COPD, Bronchiectasis, etc.
Oncology	Gastric cancer, Lung cancer, Breast cancer, etc.
Cardiology	Heart failure, Brain ischemia, Hypertension, etc.
Gastroenterology	Gastric ulcer, Reflux esophagitis, etc.
CNS	Alzheimer's disease, Depression, Epilepsy, etc.
Urology	Nocturia, Lupus nephritis, etc.
Dermatology	Acne, etc.
Ophthalmology	Age-related macular degeneration, Uveitis, etc.
Immunology	Rheumatoid arthritis, Crohn's disease, Psoriasis, etc.
Musculoskeletal disease	Osteoporosis, Lower back pain, etc.
Endocrine metabolic disease	Diabetes mellitus, Hypercholesterolemia, Hyperphosphatemia, etc.
Rare disease	Gaucher disease, Myelofibrosis, Behcet's disease, etc.

Collaborating with Japanese institutions in conducting and supporting clinical trials

Conducting clinical trials involves collaboration between pharmaceutical companies and other institutions in Japan, such as hospitals, local clinics, and contract research organizations (CRO).

Pharmaceutical Companies	CRO	Hospitals / Clinics	SMO (Site Management Organizations)
Decide to conduct clinical trials and request support from CRO	Support pharmaceutical companies with the coordination of clinical trials	Conduct trials performed by physicians and trained research professionals	Provide additional support to hospitals and clinics during trials

Partnering with local Japanese medical institutions to conduct clinical trials expands the benefit of clinical trials to the hosting area

Conducting clinical trials for new drug development contributes to local Japanese economies and improves the quality of life for people in Japan

Providing advanced treatment

Medical facilities conducting clinical trials are able to provide advanced medical treatments to their patients in these locales

Contributing to local economy

The spending on clinical trials in Japan goes to hospitals and clinics nationwide and supports local economies

Creating jobs

Related stakeholders (local medical facilities and pharmaceutical companies) employ local staff to support clinical trials

PhRMA and EFPIA member companies conducted 825 clinical trials in 2015
to deliver innovative medicines to patients in Japan

825 (+21% since 2013)

R&D Spending, Trends, and Results

PhRMA and EFPIA member companies contribute a significant share of the research and development spending in Japan

Source: JPMA data based on company disclosures for fiscal year 2014

* 72 JPMA companies ** 19 PhRMA and EFPIA member companies participating in JPMA

Note: The figures refer only to clinical research related spending during fiscal year 2014 disclosed by JPMA member companies

Reducing the “drug lag”*

PhRMA and EFPIA member companies are planning simultaneous international drug submissions** which will allow Japanese patients to be in the first wave of access to innovative medicines

Simultaneous international submissions planned by PhRMA / EFPIA member companies

- Completed simultaneous international submissions
- Planned simultaneous international submissions
- Simultaneous international submissions is under consideration
- Simultaneous international submissions is not planned or not feasible

Source: PhRMA and EFPIA Japan joint research of 28 member companies (clinical trials conducted between April 2015 and March 2016)

“Drug lag” refers to the delay to approve a new drug in Japan such as cases where approval is delayed compared to other countries, such as the U.S. and Europe

Conducting more global simultaneous clinical trials shortens the drug lag

**Simultaneous international submission refers to the submission of a new drug application (NDA) at the similar timing (within 3 months, in this study) as other countries, such as the U.S. and Europe

Bringing innovation to Japanese patients

PhRMA and EFPIA member companies obtained approval
for 185 new drugs* in Japan over the last 9 years

Number of New Drugs Approved in Japan

● Japan Total

● PhRMA and EFPIA Member Companies

Source: PMDA website

*New drugs refer to New Molecular Entities only approved between April 2007 and March 2016 (Other approvals, such as new indications, are excluded)

Besides the approvals obtained by PhRMA and EFPIA member companies, other approvals include products licensed from global companies

Continuing investment in Japan to treat more conditions

PhRMA and EFPIA member companies obtained approval
for 373 new indications* in Japan over the last 9 years

Number of New Indications Approved in Japan

● Japan Total

● PhRMA and EFPIA Member Companies

Source: PMDA website

*New indications refer to New Molecular Entities approved between April 2007 and March 2016, as well as new indications approved for existing drugs
Besides the approvals obtained by PhRMA and EFPIA member companies, other approvals include products licensed from global companies

Summary: For Japanese society and patients

We are devoted to advancing public policies that support innovative medical research, yield progress for patients today, and provide hope for the treatments and cures of tomorrow

PhRMA and EFPIA member companies' clinical research stimulates local economies through:

- *Collaboration with local Japanese clinics and hospitals to develop new drugs*
- *Funding clinical trials to develop innovative new medicines with better efficacy and safety profiles*

PhRMA and EFPIA member companies invest heavily in clinical trials across all prefectures Japan:

- *825 (+21% since 2013) clinical trials across more than 16 therapeutic areas conducted in 2015*
- *Rapid increase in clinical trials is the result of the premium for new drug development, introduced by the Ministry of Health, Labour and Welfare in 2010*

PhRMA and EFPIA member companies make continuous efforts and investment in Japan to allow Japanese patients to be in the first wave of access to innovative medicines:

- *Spent 79B JPY in the research and development in Japan in 2014*
- *Contribute around half of the new drug approvals in Japan*
